

Building the Anderson Shelter

I attended the allotment club when it first started but owing to other commitments was unable to continue on a regular basis. Recently, Mr Wallace opted for some of us to swap lessons every Tuesday for 6 weeks with Mr Hughes in the Enterprise area, so that we could study the stock markets on the internet (The Stock Market game). When Mr Hughes asked if we would like to help out with the allotment and to help build an Anderson shelter, my interest in the club returned and I decided to build the door. My main focus in creating it was to keep the elements from entering the shelter and probably ruining the equipment inside. All I used was some timber, screws, a drill driver, a hinge with a latch and some weathering; so this door only took a minimal amount of time to construct. Luckily, I put the door up only a day before the weather turned ugly. Finally I've contributed something to the school!
